PROFESSIONAL SUMMARY

Results-driven BCA student and self-taught Python developer with hands-on experience building full-stack web applications using Flask, FastAPI, and modern front-end technologies. Proficient in deploying containerised services with Docker, configuring secure tunnels with Cloudflare and Tailscale, and integrating REST APIs. Comfortable working on Linux environments and managing version-controlled codebases via GitHub. Seeking a backend or web developer role where I can contribute practical skills and continue growing as an engineer.

TECHNICAL SKILLS

Languages: Python, JavaScript, C

Frontend: HTML5, CSS3, Tailwind CSS, Bootstrap, JavaScript (ES6+)

Backend / Frameworks: Flask, FastAPI, REST API design

Databases: SQLite, MongoDB

DevOps & Tools: Docker, Git, GitHub, Linux (Ubuntu), VS Code

Networking: Cloudflare Tunnel, Tailscale, basic networking (DNS, HTTP/S, ports)

AI Tools: ChatGPT, Gemini AI, Gemini CLI, OpenCode

PROJECTS

Personal Portfolio Website — *HTML, CSS, Tailwind CSS, JavaScript*

- Designed and developed a fully responsive personal portfolio website from scratch using HTML5, Tailwind CSS, and vanilla JavaScript.
- Deployed the site publicly via Cloudflare Tunnel, enabling secure HTTPS access without a traditional hosting provider.
- Implemented mobile-first design principles, achieving consistent rendering across Chrome, Firefox, and mobile browsers.

Flask REST API Backend — *Python, Flask, SQLite, Docker*

- Built a RESTful API server with Flask, implementing CRUD endpoints for a task-management application with SQLite persistence.
- Containerised the entire application using Docker, reducing environment setup time and enabling one-command deployment.
- Structured the project with Blueprints and a service layer, improving code modularity and maintainability.
- Tested all endpoints with Postman; documented API routes with clear request/response schemas.

FastAPI Microservice with MongoDB — *Python, FastAPI, MongoDB, Docker*

- Developed an async FastAPI microservice with MongoDB as the document store, leveraging Motor (async MongoDB driver) for non-blocking I/O.
- Implemented JWT-based authentication middleware to protect private API routes.
- Deployed the service on a Linux server using Docker Compose, exposing it securely via Tailscale for internal network access.

Linux Home Server Setup — *Linux, Docker, Tailscale, Cloudflare Tunnel*

- Configured a personal home server running Ubuntu Linux, hosting multiple Dockerised web services simultaneously.
- Set up Tailscale VPN for secure remote SSH access and Cloudflare Tunnel to expose select services to the public internet over HTTPS.
- Automated service restarts and basic log monitoring using systemd unit files and cron jobs.

EDUCATION

Bachelor of Computer Applications (BCA) — Amity University, Noida

2023 – Present (2nd Year)

Class XII — CBSE Board — CBSE

Completed 2023

CERTIFICATIONS

Programming in Python with AI — Internshala

2024

Computer Fundamentals & Office Applications — Computer Course Certificate

2023

ADDITIONAL INFORMATION

- Actively learning system design fundamentals, database optimisation, and cloud deployment (AWS / GCP basics).
- Comfortable with agile workflows; familiar with GitHub Issues and project boards for task tracking.
- Strong interest in AI-integrated applications and healthcare technology; exploring ICMR / NICPR research internship opportunities.
- Languages: English (Professional), Hindi (Native).
