

DIKSHA MORWAL

Python Backend Developer • Web Developer • DevOps Enthusiast

dikshamorwal3[at]gmail[dot]com +91 93106 73394 github.com/Dikshamorwal New Delhi / Noida, India

PROFESSIONAL SUMMARY

Results-driven BCA student and self-taught Python developer with hands-on experience building full-stack web applications using `Flask`, `FastAPI`, and modern frontend technologies. Proficient in deploying containerized services with `Docker`, configuring secure tunnels with `Cloudflare` and `Tailscale`, and integrating REST APIs. Comfortable working in Linux environments and managing version-controlled codebases via GitHub. Seeking a backend or web developer role to contribute practical skills and continue growing as an engineer.

PERSONAL PROFILE

Current Study: BCA Undergraduate (2nd Year)
Core Stack: Python Backend, Flask, FastAPI
OS Preference: Linux (Ubuntu Server / Lab)
Languages spoken: English & Hindi

WELCOME TO MY WEB PORTFOLIO

Hello! I am a software engineer focused on building robust backend systems, containerized web servers, and local networking infrastructures. I've designed this multi-page workspace to showcases my specific capabilities across key dimensions of developer engineering.

Skills Dashboard

Interactive review of Python, frameworks, database, and devops proficiencies.

Developer Blog

Read tutorials, deep-dives, and lessons from backend engineering.

Home Server & Education

Review academic background and secure local networking homelab.

KEY CORE COMPETENCIES

Here is a snapshot of core standards and models I employ across my pipelines:

REST API Architecture: Implementing clean separation with models, routes, and services using Flask Blueprints and FastAPI Routers.

Containerization first: Packaging services using optimized Dockerfiles and Docker Compose orchestrations.

Secure Networking: Deploying reverse proxies and encrypting lines with Cloudflare Tunnels and Tailscale virtual private meshes.
